

10 Gigabit Fiber Optic Module

Overview

This 10 Gigabit Fiber SFP+ Optical Transceiver Module supports standard digital diagnostics monitoring (DDM) functions, also known as digital optical monitoring (DOM). This lets you monitor parameters of the SFP, such as optical output power, optical input power, temperature, laser bias current, and transceiver supply voltage, in real time. The transceiver's mini-GBIC form factor helps it take up less space on the equipment it plugs into. It has been designed, programmed and tested to work with HP / HPE-compatible switches and routers.
