

# 10kV Copper Busbar Current

## Overview

---

2 A/mm<sup>2</sup> — the most conservative value, used for busbars inside enclosed switchgear with limited ventilation. In this new edition the calculation of current-carrying capacity has been greatly simplified by the provision of exact formulae for some common busbar configurations and graphical methods for others. The current rating is calculated from the conductor cross-sectional area, material (copper or aluminium), and maximum.
