

A few meters under the fiber optic cable

Overview

Standard Installation: Fiber optic cables are generally buried at depths ranging from 3 to 4 feet (approximately 0. This depth helps protect the cable from damage caused by digging, animals, and environmental conditions like freezing and flooding. 8 million km in scope by 2025 (per TeleGeography), burying these cords of light comes with the benefits of avoiding cable damage, decreasing downtime, and extending their operational lifetime. It forms a critical backbone for modern communication networks across both urban and rural environments.
