

A switch with one optical port connecting two optical fibers

Overview

A fiber-optic switch is a device used in fiber optics to route light from one or more input fibers to one or more output fibers. It can act as a simple on/off switch or a complex matrix switch with multiple inputs and outputs, such as 2×2 or even 64×64 . Network topology refers to the way in which the links and nodes of a network are arranged in relation to each other. I have purchased 4 cisco GLC-SX-MM mini modules to put into the 3560's, 2 in each device. Can two switches with optical ports be directly connected by optical fiber?

Yes, the main line of the optical fiber LAN is a direct. The connection between two or more Ethernet switches in a certain way (Uplink port, etc.
