

Access Layer Switch Specifications

Overview

Pick an access layer switch that (1) offers enough ports for every wired and PoE device you'll add over the next three years, (2) delivers the speed—1 Gbps for general traffic or 10 Gbps for heavy data—to keep users productive, and (3) includes security and management features that. Cisco® C9350 Series Smart Switches deliver exceptional performance and robust security with flexible management options to meet the demands of modern enterprise networks. Whether to use Fast Ethernet or Gigabit Ethernet depends on the specific requirements of your network. The access layer is where endpoints (such as phones, laptops, video-conferencing sets, printers, IoT sensors, IP cameras, and servers) are primarily connecting to the network. These networks are designed with three tiers that facilitate strategic installation, management, and maintenance, and so on.
