

Advantages of Pump Room Cable Trays

Overview

Cable trays were developed and patented by Romtec Utilities as a means to reduce the operating costs of our pump stations and to allow on-site personnel to easily perform maintenance activities without hiring electricians. Whether it's for a routine inspection or emergency repairs, personnel will often need to access components inside the sump. The alloys are selected for their mechanical properties, such as strength and hardness, as well as for their resistance to corrosion, particularly stress corrosion, cracking, and pitting commonly manufactured using aluminum. Pump stations are quite harsh on equipment since they are wet and shaky at all times. Quality Type TC, Type PLTC, or Type ITC small diameter multi-conductor control and instrumentation cables will not be damaged due to the cable tray rung spacing selected, but the installation may not appear neat if there is significant drooping of the cables between the rungs. They provide a robust structure that accommodates and safely transports cables from one point to another. The modular design allows for easy modifications and expansions, making it ideal.
