

## Overview

---

A fiber pigtail is a short fiber optic cable with a factory-installed connector at one end and a bare fiber at the other, allowing it to be spliced directly into fiber cabling or patch panels. It's used to terminate optical fibers in ODFs (optical distribution frames), closures, or. Get the wrong connector type, the wrong polish, or skip proper fusion splicing technique—and you're looking at elevated signal loss, increased back reflection, and a. In fiber optics, pigtails are fusion-spliced to field fiber inside splice trays — the most common termination method in telecom and data center networks.
