

Are fiber optic routers a waste of money

Overview

While fiber offers superior speed and reliability, the costs associated with deployment and maintenance can vary significantly depending on infrastructure needs, location, and regulatory considerations. The best thing we did (and you can do) is improve your wireless networking by running some Ethernet cable to the other side of the house instead of relying on mesh wireless (which will limit your bandwidth severely due to. It's the \$1,000 question: Should you buy your own router or rent one from your internet service provider?

That equipment fee might not seem like much when you first sign up for internet service, but fast forward a few years and you're looking at hundreds in wasted dollars. As a result, you'll spend hundreds of dollars on something that's nice to have, but may not be the perfect solution in your situation. Fiber-optic internet uses significantly less electricity than cable, DSL, or satellite — and as global power demand keeps climbing, that difference is starting to matter a lot. Compared to legacy networks, fiber offers greater bandwidth, lower maintenance costs, and enhanced scalability—making it a future-proof solution for growing data demands.

Are fiber optic routers a waste of money

I Used to Tell People to Skip Wi-Fi 7 Routers. CNET's Lab Testing

I used CNET's lab test data to calculate the cost-per-megabit for each router generation. The results showed me I was wrong about the value of Wi-Fi 7 routers.
