

# **Building a test system for optical modules**

## Overview

---

What test procedures are required for high-quality optical modules?

Optical modules will go through strict testing and quality inspection procedures before shipment, such as material testing, parameter testing, aging testing, real machine testing, end-face. The Multi Application Test System (MATS) is an integrated platform for high-precision, high-throughput testing of optical devices, transceivers, and photonic components. are adapting to test and mass produce next-generation optical interconnects in a cost-effective manner. This paper proposes a comprehensive solution covering critical testing phases specifically for optical modules with mainstream MPO interfaces. Clock Recovery CR600 60Gbaud Optical/Electrical Clock Data Recovery Unit The CR600 Optoelectronic Clock Recovery Unit supports both NRZ and PAM4, enabling. In fiber optic networks, optical transceivers such as SFP, SFP+, QSFP28, and QSFP-DD play a vital role in converting electrical signals into optical signals and vice versa.
