

# **Configure the management IP for the core switch**

## Overview

---

To remotely manage the device, an IP address must be defined to access the switch. This is a fundamental process for accessing the switch's web configuration interface and making the necessary configurations for proper network operation. A Cisco switch gets its management IP on an SVI (usually VLAN 1 or a dedicated mgmt VLAN).

## Configure the management IP for the core switch

---

# ECS5520 Series CLI Reference Guide

---

The switch can be configured to accept management commands from Simple Network Management Protocol (SNMP) applications such as Edge-Core ECVIEW Pro. You can configure the

## Service , Kubernetes

---

The cloud-controller-manager component then configures the external load balancer to forward traffic to that assigned node port. You can configure a load balanced Service to omit

## **Configure IP Address Settings on a Switch using the CLI**

---
