

Construction sequence for laying overhead optical cables

Overview

Fiber optic cable construction is roughly divided into the following steps: preparation → routing project → fiber optic cable laying → fiber optic cable splicing → project acceptance. Preparation (1) check the design information, raw materials, construction tools, and equipment. Choose the type of pole The basic pole height is 7m and the tip diameter is 150mm. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. Manual or mechanical traction can be used during laying, but attention should be paid to guidance and lubrication.
