

# Data Center Server Rack Base

## Overview

---

A network rack (also called a server rack) holds networking equipment such as servers, modems, uninterruptible power supply (UPS) units, routers, network switches, and audio and video equipment. Server racks can be a specialized computer case, wall-mount rack, standing frame, or server cabinet designed to enclose networking equipment. 4-post open frame— This type of server rack ranges in height and depth from 24U to 45U. It is not enclosed, which offers substantial ventilation capacity but little security. Power protection and management are key concerns for data center operators and require enhanced options for significant power requirements.
