

# Depth of optical fiber cable duct

## Overview

---

Underground cables are pulled in conduit that is buried underground, usually 1-1.2 meters (3-4 feet) deep to reduce the likelihood of accidentally being dug up. In this guide, we'll break down depths commonly used, influencing factors, best practices, challenges, and discuss emerging trends. Burying these cables protects them from physical damage, weather, and unauthorized access, but the depth varies based on location, cable type, and local. The short answer, based on general industry standards and the National Electrical Code (NEC), is that fiber optic cable is typically buried between 24 inches (60 cm) and 30 inches (76 cm) deep. However, simply hitting this depth isn't enough to guarantee your network survives. Recommended cable: duct-grade loose-tube cables such as GYTS, high-fiber-count ribbon cables, or mini/micro-duct fibers.

### How Deep Is Fiber Cable Buried?

---

If the fiber optic cable is installed in a conduit or duct, the conduit is usually buried at a depth of 18 to 36 inches (approximately 0.5 to 0.9 meters). This provides an additional layer of
