

Dielectric Film Wave Fiber Coupler

Dielectric Film Wave Fiber Coupler

Efficient optical coupling into single mode silicon-on-insulator thin

Abstract We have designed a grating coupler embedded within high index contrast dielectric interfaces for high efficiency coupling into single mode silicon-on-insulator slab waveguides.

Review: fiber-based dielectric-tunable electromagnetic wave

Abstract With the intensification of electromagnetic pollution, research on electromagnetic wave-absorbing materials has become crucial for addressing electromagnetic compatibility and

Optical Fiber Coupling

Sensors with a fixed wavelength source can only detect SPP waves over a limited range of refractive index of the partnering dielectric material, but this limited range can be shifted by the application of a

mm-Wave Links and Wireless Fiber

(a) Current state of interconnects in data centers, (b) multi-mode mm-wave dielectric waveguide for high-throughput interconnects, (c) planar multi-mode coupler

E-Plane Directional Couplers in Substrate-Integrated Waveguide Technology

INTRODUCTION As a reasonable compromise between microstrip and rectangular waveguide circuitry, substrate-integrated waveguide (SIW) technology has found many applications in the lower

Design of Novel Multilayer Microwave Coupled-Line Structures Using

ABSTRACT A novel octave band DC block (2.5 -10.5GHz) and a broadband 3dB directional coupler (3-8GHz) have been designed, fabricated and tested using a new multilayer format. The multiple layers

WDM Components in Optical Fiber Systems

It provides an overview of WDM and describes various passive and active devices used in WDM networks, including optical couplers, isolators, circulators, fiber

Highly efficient fiber to Si waveguide free-form coupler for foundry

The coupler achieves a low coupling loss of 0.8 dB for the fundamental TE mode, along with 1 dB bandwidth exceeding 180 nm. The broadband operation enables diverse bandwidth-driven

(PDF) Dielectric Mirror Embedded Optical Fiber Couplers

Generally tilted in-core fiber gratings are modeled by an equivalent inhomogeneous optical thin film. Its reflectance spectrum is evaluated using the

Fiber coupling and attachment to integrated waveguides

Automated equipment for measuring and connecting optical fibers to chips and panels is therefore essential. At Fraunhofer IZM we have an EFRE-funded facility

Cantilever Couplers for Low-loss Fiber Coupling to

In this research, we present cantilever couplers for fiber-to-chip and chip-to-chip light coupling. Cantilever couplers enable broadband and low loss light coupling to

High-efficiency broadband light coupling between optical

In this article, we review three important classes of optical coupling schemes between optical fibers and integrated waveguides based on high refractive index

Efficient broadband polarization-insensitive edge coupler

We propose a broadband, polarization-insensitive, and fabrication-friendly edge coupler (EC) optimized for efficient coupling between a 600-nm X

FIBER CONNECTORS, SPLICES AND COUPLERS C. Kao and G.

FIBER CONNECTORS, SPLICES AND COUPLERS C. Kao and G. Bickel ITT Electro-Optical Products Division Roanoke, Virginia 1.0 INTRODUCTION There are two major ways of connecting fibers:

Dielectric film based optical fiber sensor using Fabry-Perot resonant

Dielectric film depositing is another advanced technique to fabricate optical fiber sensor.

The dielectric thin films can enhance the intensity of reflection light [,] and generate two wave

Scalable and efficient grating couplers on low-index photonic

Here we present a flexible strategy for the realization of highly efficient grating couplers on such low-index photonic platforms.

The Software RP Fiber Power: a Fiber Coupler Based

Example Case: Simulation of a Fiber Coupler Here we show how RP Fiber Power can be used to analyze and optimize fiber couplers. We use the beam

WDM Technology: TFF (Thin-Film Filter) & AWG

Among WDM solutions, Thin-Film Filter (TFF) and Arrayed Waveguide Grating (AWG) are two leading approaches, each with unique

Evanescent waveguide couplers

The realization of this directional coupler necessitated the development of an integrated quasi-optical substrateless silicon platform that is

Grating Coupler

A grating coupler is defined as a device that uses a periodic structure to diffract light in and out of an optical fiber by directing vertically incident light into waveguides through the principle of diffraction. Its

Chapter 11

A variety of thin films suitable for optical wave guiding has been reported so far. These films include epitaxial layers of high resistivity on low resistivity GaAs (Ref. 10), composite structure of GaAs

Lecture13_228B_W06_Final.ppt

Multilayer Dielectric Thin-Film Filters (TFF) DTMFs can be designed to have flat passbands, low losses, low PDL and polarization sensitivity as well as sharp frequency rolloff.

Chapter 8 Coupling Between Waveguides

Coupling Between Waveguides The phenomenon of optical tunneling can be used not only to couple energy from a fiber or a beam to a waveguide, as described in Chapter 7, but also to couple one

Flexible Optical Waveguide Film with 45degree micro-mirror couplers

The multimode fiber array conjunction with VCSEL and Pin photodiode array is widely used in board to board and/or system to system interconnection. We demonstrate a flexible optical waveguide film

Evanescent waveguide couplers

One method to make waveguide or fiber couplers is to use straight sections of the guides where the evanescent modes of one guide overlap with the modes of a

Fiber Coupler

Fiber couplers, circulators, and free-space beam splitters are used to build a system interferometer. To achieve the maximum ranging depth possible, it is desirable to use the full coherence length of the

Subwavelength Dielectric-Fiber-Based THz Coupler

Unlike traditional directional couplers, the demonstrated subwavelength directional fiber coupler shows less dependency on the overlapped length of two fibers and the delivered THz
