

Do outdoor fiber optic cables need conduits

Overview

Work with professionals who know the National Electrical Code and local regulations. Based on installation methods, outdoor fiber optic cables are categorized as follows: Underground fiber cables are generally pulled within a conduit that is buried underground, usually 1 to 2 meters deep, to reduce the possibility of being dug up. Rugged fiber optic cable is constructed so as to resist ultra-violet light and temperature fluctuations and may include features to. Finding the right conduit and compatible patch cables is essential for protecting fiber runs and ensuring reliable performance.
