

Do you have blue single-mode fiber

Overview

A blue connector means you're looking at single-mode fiber with a UPC (Ultra Physical Contact) polish. UPC connectors have a flat endface and offer low insertion loss and back reflection. To determine if your SFP (Small Form-factor Pluggable) module is single mode or multimode, you can look for specific markings or labels on the module itself. Typically, single mode SFP modules are labeled as "SM" or "single mode," while multimode modules may be labeled as "MM" or "multimode. Single mode fiber optic cable is made up of a small diameter glass or plastic core surrounded by cladding, which is a layer of reflective material.
