

Does a 450Mbps wireless router support a 100Mbps fiber optic connection

Overview

If the device ports are all 100Mbps and I provide the router with 300Mbps directly to WAN, how can it give more than 100?

how is this not related?

2. well 70-90 is too far from 450, it can't even reach close to 150! Some customers may report the speed is limited to 100 Mbps when connected to the TP-Link router, while the speed is much faster and can reach up to 500+ or 900+ Mbps when connecting to the ISP modem directly. Look for routers with AX or AC designations (Wi-Fi 5 or 6) that support faster speeds than older N standards (Wi-Fi 4). Fiber optic technology has become increasingly popular in recent years due to its high-speed data.

Does a 450Mbps wireless router support a 100Mbps fiber optic connection?

It's a fiber optic connection, I'm not sure what you mean by the second part. I chatted with my Internet provider customer service before buying the new router (I was wondering why I was
