

Does the twisted-pair cable in the distribution box need to be grounded Price

Overview

Without a proper ground connection, the shield cannot discharge the electromagnetic energy it absorbs and may actually worsen interference. But how you ground your cables can make the difference between a reliable, noise-free network and one plagued with mysterious issues. This article will help network installers, IT professionals, and technicians make informed decisions when. While electrical services, telecommunications equipment, and all other low voltage systems are required to be bonded to ground per national and local electrical codes and industry standards for safety reasons; the specific need to ground screened and shielded network cabling systems is only a.
