## Overview

---

The wire inlet and outlet of explosion-proof distribution box should be set at the bottom of the box, not at the top, side, back or door of the box; The incoming line and outgoing line shall be sheathed and bundled, and waterproof bending shall be made; The conductor bundle shall. Explosion-proof electrical equipment, such as explosion-proof distribution boxes, is specifically designed for hazardous environments where flammable gases, vapors, or dust may be present. Proper installation, wiring, and usage are critical to ensuring the safety and functionality of these systems. Emergency Power System: NEC Article 700 specifies electrical safety requirements for circuits and equipment that must operate to enable the evacuation of buildings where large numbers of people assemble, such as hotels, theaters, areas, and healthcare facilities.
