## Fiber Distributed Data Interface

---

Fiber Distributed Data Interface (FDDI) is a standard for data transmission in a local area network. It uses optical fiber as its standard underlying physical medium.

## Fiber Distributed Data Interface

---

FDDI-II, a version of FDDI described in 1989, added circuit-switched service capability to the network so that it could also handle voice and video signals.

## **Fiber Distributed Data Interface (FDDI)**

---

The FDDI specifications define a family of standards for 100 Mbps fiber optic LANs that provide the physical layers and media access control sublayer of the data link layer, as defined by the ISO/OSI

## **Analysis of Efficient FDDI Network**

---

In this section we will cover the results for the performance analysis of the FDDI on the basis of efficiency. We have fixed the number of stations to 100 and analyzed the performance of the FDDI.
