

Fiber Optic Ceramic Ferrule Industry Standards

Overview

Ceramic ferrules are well known for having high durability and the highest levels of dimensional control, making them suitable for use in all fiber applications (both singlemode and multimode) specified in TIA/EIA-568-B. This allows for such media to be deployed into enclosures and panels to form structured cabling solutions, or in patch cords to facilitate transceiver connections. A ferrule's job is to hold the fiber core in perfect concentric alignment while maintaining extremely tight tolerances according to IEC 61755, IEC 61300. They are made of zirconia ceramic, which offers the highest performance and durability of all ferrule material types. 1 FT200EMT Multimode Fiber Terminated with CF230-10 Ceramic Ferrule (Sold Assembled as our M81L01 Optogenetics Patch Cable) Figure 1.
