

Fiber optic cable failed inspection

Overview

Start with the simplest, fastest checks (visual inspection, cleaning, cable routing) and only move to instrumentation (power meter, VFL, OTDR) when those steps don't clear the fault. First step is to make an accurate inspection of the ferrule, using a video microscope. Fiber optic cables are the backbone of modern communications, delivering high-speed data over long distances with minimal loss. However, in real-world installations, whether underground, aerial, or in harsh industrial environments, fiber cables can and do fail.
