OverviewParametersBackgroundApplicationsHistoryTechnologyComparison with electrical transmissionGoverning standards

Because the effect of dispersion increases with the length of the fiber, a fiber transmission system is often characterized by its bandwidth-distance product, usually expressed in units of MHz·km. This value is a product of bandwidth and distance because there is a trade-off between the bandwidth of the signal and the distance over which it can be carried. For example, a common multi-mode fiber with a bandwidth-distance product of 500 MHz·km could carry a 500 MHz signal for 1 km or a 1000 MHz sig

## What is Full Fibre Broadband , Hyperoptic

---

Full fibre broadband represents a generational shift in how we access the internet. Instead of relying on century-old copper lines built for voice calls, it uses pure fibre-optic cabling to deliver data at the

## Fiber-optic communication

---

Two main types of optical fiber used in optical communications include multi-mode optical fibers and single-mode optical fibers. A multi-mode optical fiber has a
