

Fiber optic cable installation at the station

Overview

The plan should include equipment and supplies, fiber cable specification, location of equipment, testing requirements, data forms for testing, personnel experience level and assignment, installation methods, identification of potential problem areas, safety issues, etc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. Fiber routes often run through public rights-of-way (such as along roads or sidewalks) or utility easements—designated corridors where infrastructure like electricity, water, and communication lines can be installed. When fiber optic construction crosses private property, private property easements. Blown cable installation refers to a method of installing small cables in microducts using compressed air and a machine that pushes the cable into the duct.
