

Fiber optic cable model MPO

Overview

Originally introduced for use with multi-fiber ribbon cable, MPO connectors feature a linear array of fibers in a single ferrule. For MPO connectors, these include IEC 61754-7 and EIA/TIA-604-5 (FOCIS 5) standards that specify the physical attributes of the connector, such as pin and guide hole dimensions for male and female interfaces. MPO connectors are used in duplex fiber applications throughout the data center as a way to deploy pre-terminated plug-and-play backbone trunk cables between active equipment. MPO-terminated trunk cables used in duplex backbone links take up less pathway space, ease cable management, and offer faster deployment compared to using individual duplex c. With the first iteration of 800 Gig parallel fiber optic applications (and future 1.
