

# **Fiber optic communication well communication line cutover**

## Overview

---

The method comprises the following steps of: removing a new optical fiber cladding or a protective covering; cleaning the surface of a naked optical fiber; accessing a new optical fiber after an old optical cable is cut off; measuring the loss of an optical fiber. The invention relates to a cut-over method of a communication optical cable line strip system. 1 in the cable must be checked before cutover cutover cable connector location and whether the core design, this should be done in the review route. This guide covers every phase — from initial planning through execution to post-cutover closeout — with the step-by-step procedures used on live fiber networks. If a fault causes service interruption, it will be handled according to the fault repair procedure, and if it does not affect the business but does not cause a fault, it will be handled.
