

Fiber optic module single-mode 40km

Overview

It uses fiber optical technology to send and receive data through completing the process of optical signal - electrical signal / electrical signal - optical signal. An optical transceiver module consists of two parts: the receiving part and the transmitting. In order to meet a variety of needs of transmission, the manufacturers launched a variety of categories of optical modules. Common switch brands like CISCO, HUAWEI, H3C, Juniper, D-link, HP, IBM, dell, Mikrotik etc.
