

Fiber optic router experiences intermittent network outages

Overview

Your fiber internet keeps going out due to a variety of reasons ranging from issues with the fiber optic line itself, problems with your home network equipment, or even service outages; the most likely cause is signal degradation or equipment malfunction. Fiber optic networks are celebrated for their speed and reliability, but even the best systems can encounter problems. When issues like signal loss, slow speeds, or intermittent connectivity arise, systematic troubleshooting is key. In an era where reliable high-speed internet is non-negotiable, Fiber to the Home (FTTH) has emerged as the gold standard for connectivity. I ruled out my router by bypassing it and plugging a single device through ethernet.
