

# **How much does it cost to protect a construction site electrical distribution box**

## Overview

---

Weatherproof boxes, constructed from durable die-cast aluminum or heavy-duty plastic with gaskets, are necessary for outdoor installations and can cost between \$6 and \$30 for a single unit depending on the size and NEMA rating for ingress protection. Understanding distribution box cost involves examining the comprehensive investment required for electrical distribution systems that serve as crucial infrastructure components in residential, commercial, and industrial settings. You may need to protect outlets during drywall installation, shield an open junction box, or safeguard an electric panel. BOSECKER construction site power distributors are designed and manufactured in accordance with the manufacturer standard IEC 61439 and user standard IEC 60364. However, exposure to weather, frequent relocation, rough use and other conditions not normally encountered with conventional wiring systems necessitate special consideration not required in other applications or in completed structures.
