

How much does one meter of single-mode or multimode fiber cost

Overview

Choosing between single-mode (SMF/OS2) and multimode (MMF/OM3-OM5) fiber is more than a cabling preference, it determines your reachable distance, optics cost, upgrade path, and even day-to-day operability (polarity, cleaning, testing). Fiber-optic cable materials typically cost \$1 to \$6 per linear foot, depending on fiber count and cable type. Commercial building installations with 100-200 network drops generally range from \$15,000 to \$30,000. Single-mode fiber costs less per foot than multimode fiber, but it requires more. This counterintuitive finding emerges from a detailed analysis of hyperscaler data center. Here's a general pricing reference: These are indicative prices based on standard configurations.
