

How to prevent the fused fiber from breaking

Overview

To mitigate this risk, one strategy is to reduce the cladding diameter at specific points, which can help stop the propagation of the fiber fuse. This is a critical issue for fiber-optic links with high transmission capacities. This guide reveals the secrets to fusion splicing with little fluff—just proven, straightforward techniques refined from years of work in the field. Do you open just one clip at a time?

Do you bring your splice protector up to the clips?

Do you hold the fibre down?

The type 90 opens by. Note: Beware of fiber end surface contamination, the fiber protection sleeve should be threaded before fiber stripping.
