

# **How to reposition cables when the cable tray is full**

## Overview

---

Use the recommended quantity of UL Classified splices to connect sections and at places where the tray is cut. Run an appropriately sized ground wire alongside the tray and attach it to each tray section and on both sides of a cut in the tray. Cable tray types, fill rules for single-conductor and multiconductor cables, ampacity derating, separation requirements, and when to use tray vs conduit. This code does not apply to all areas and I have seen a lot of older installations that did not follow it, especially in power plants and substations. Cable Tray Installation Spacing plays a huge role in the safety, efficiency, and reliability of electrical systems. This guide covers the critical steps, from selecting the right electrical cable tray and performing accurate cable fill calculations to managing a safe cable pull through and ensuring all bonding and grounding requirements are met.
