Overview

Multimode fiber supports multiple light paths and is ideal for shorter distances. The outer jacket is usually orange (OM1/OM2) or aqua (OM3/OM4), with a larger core size of 50 or 62. This guide explains how to identify them by appearance, labeling, and technical specifications, helping you make the right choice for your installation. This guide explains the five generations of multimode fiber - OM1, OM2, OM3, OM4, and OM5 - covering their physical characteristics, color coding, bandwidth, maximum distances at different data rates, optical sources (LED, VCSEL, SWDM), and real-world applications in enterprise networks and data.
