

How to test fiber optic cable reels

Overview

The best way to avoid this problem is to test the cable while it is still on the reel or in the pull-box. Was the cable faulty to begin with--in which case you can invoke the cable manufacturer`s guarantee--or was it. There are two reasons we may want to test bare fiber, by that we mean fiber that has not been terminated in connectors but is simply plain optical fiber, The first one is to ensure the fiber or cable being manufactured meets its specifications, as is done by every manufacturer. Single reel inspection work includes: checking, counting, appearance inspection and measurement of the specifications and quantity of optical cables and connecting equipment transported to the site, and measuring the main optoelectronic characteristics. In this guide, we'll walk through how to test fiber optic cable and best practices to simplify your next fiber test.
