

# **How to tie knots when laying optical cables**

## Overview

---

Lines or ropes must be placed using care, where there are already optical fibre cables in a duct; knots in the lines or ropes must be avoided. Fiber optic cables have Kevlar aramid yarn or a fiberglass rod as their strength member. They are designed to withstand heavy loads and stresses, making them ideal for applications where safety and reliability are paramount. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed.
