

Industrial Switches for Backbone Networks OSFP

Overview

They support OSPF, BGP, RIPv1/v2, VRRP, RSTP, and static routing with a redundant architecture and hot-swappable modules. Kyland's Layer 3 Backbone Switches, like the SICOM6800 series, are designed for critical industrial and enterprise networks. Our Industrial Ethernet Switch portfolio comprises Managed and Unmanaged Switches with Gigabit, PoE, IEC 61850 certification, and for DIN rail mounting. This gives you the flexibility to build powerful and secure networks, even in harsh environments: copper and FO ports, as well as redundancy. Another advantage of the SFP variant is its configuration with SFPs with up to one Gbit/s, e. , for the setup of fast gigabit connections when networking multiple cells (shop floor aggregation). : TMIE8220-4GF-L3 4 Gigabit fiber ports + 16 Gigabit copper ports; Supports RIP/OSPF/PIM Layer 3 Routing Protocol ; Supports T-Ring/MSTP/VRRP/EAPS for network red.
