

# **Intelligent computing centers use coherent optical modules with low loss**

## Overview

---

■ All-optical switching: Eliminates O-E-O conversion for ultra-low latency and zero data leakage risk. The rapid growth of artificial intelligence (AI), data centers, and high-performance computing (HPC) has increased the demand for large bandwidth, high energy efficiency, and high-density optical interconnects. Co-packaged optics (CPO) technology offers a promising solution by integrating photonic. When the baud rate approaches 200 GBaud per lane, the bottle-neck of traditional intensity modulation direct detection (IM-DD). What are Coherent Optics?

Coherent optics leverage sophisticated modulation and digital signal processing (DSP) techniques to encode data. Currently, they are still in the testing and validation phase, with compatibility and standardization issues requiring ongoing research and assessment.
