

Inverters and Distribution Boxes

Overview

What is a Distribution Box?

An inverter is a device designed to convert DC power absorbed by solar panels into AC power used to power the necessary electronic devices. With a variety of inverter types available following the continuous development of inverter innovation, Joeyoung inverter. Even with proper use of electrical consumers, life-threatening fault currents can occur, e. If these defects remain unnoticed, there is an increased risk of accidents, especially in connection with moisture. Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I,V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems. In electrical systems, and particularly in solar photovoltaic (PV) installations, understanding the differences between distribution boxes and combiner boxes is crucial.
