

# Is prefabricated optical cable fiber Why

## Overview

---

Fibre optic cable assemblies are pre-fabricated and comprise a complete end-to-end optical network cable solution. Multimode fiber networks for 40 and 100 gigabits/second use parallel transmission with 8 or 20 fibers per link using 12-fiber MTP/MPO connectors that are not easily terminated in the field. The new generation of optical LANs based on fiber to the home technology (FTTH) uses singlemode fiber, not. A pre-engineered fiber cabling system is a fully pre-terminated optical connectivity solution manufactured and tested in a controlled environment before arriving at the installation site. A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry light.
