

# **Is the primary distribution box the same as the main distribution box**

## Overview

---

The primary distribution box refers to the main distribution box, typically located in the distribution room. It serves as a central point for receiving power from a primary source, such as a main electrical panel or generator, and then distributes it to. Let's make an example for clarity: A newly constructed residential area introduces a 10kV power line to a substation. In any electrical system, the distribution box is the heart and brain, a critical component that safely manages and distributes power from the main source to various circuits.
