

# **Is the yellow pigtail a gigabit network cable**

## Overview

---

This means that a yellow Ethernet cable could be PoE, or it could just be a standard data cable. Security cameras for your home or garage are examples of devices that would utilize this connection. The yellow ethernet cable, among other networking cables, has a specific application and significance in structured cabling systems. T568A and T568B are the two main wiring standards, with T568B being the most common for modern networks. Fiber optical, copper twisted pair Category cable, and coaxial cable are all capable of transmitting Ethernet data packets, so therefore Ethernet is a protocol and not specifically a cable type. That being said, there are a few consistencies within the industry worth mentioning here.
