

# Measurement in Relay Protection

## Overview

---

IEC 60255-1:2022 specifies common rules and requirements applicable to measuring relays and protection equipment, including any combination of equipment to form a distributed protection scheme for power system protection such as control, monitoring and process interface equipment .  
Protective Relays - Technical Seminar Nov 2016 - Copyright: IEEE 2 Abstract:  
Protective relays and devices have been developed over 100 years ago to provide "lastline"of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of the system. (1)  
Protecting the motor itself (burnout protection) (In this case, you must select a Motor Protective Relay that is suitable for the load rather than the. We review traditional performance measures, such as transient overreach for distance zone 1, and formalize other measures, such as operating time and dependability.
