

Mini-module cabinet cable routing

Overview

Quick Answer for Busy Professionals: Efficient cable routing reduces downtime by 30%. Signal cables or weak-current cables inside cabinets are sorted by cable managers, cable rings, and cable trays. Figure A-3, Figure A-4, and Figure A-5 show the routes of the cables out from the front of customer equipment. Neat and tidy cable routing is the foundation for proper IT equipment operation: Clearly labelled cables and neatly ordered cable routes ensure that you can easily patch or replace individual components whenever the need arises. Belden's Enclosure Cable management products maintain proper bend radius of copper and fiber patch cords to provide easy access to connectivity, reduced patch cable routing complexity and simplified moves, adds and changes.
