

Network rack cable too long

Overview

For a non-permanent fix, coil the wire neatly and secure it with Velcro straps. As I'm going about making new cables and replacing existing ones, I'm wondering if there are any sorts of best practice methods for determining the exact cable length needed in server rooms besides obviously just using a measuring tape. The obvious answer is to just get shorter cables, but is there a good solution for when you must use longer cables?

This will be for network, fiber, and power cables. Here are the most common rack-level cabling mistakes I see, and the simple fixes that prevent them. [Using the Wrong Cable Lengths](#) This is the biggest and most consistent problem inside racks. Cables that are too long create slack that spills everywhere — drooping across ports, blocking airflow.
