

# **New Solution for Swedish Base Station Energy Management System**

## Overview

---

In collaboration with Powercell, Euromekanik, and Soltech, Polarium has managed to establish a system concept that extended the backup power capacity of a mobile base station from just a few hours to up to 110 days. By combining fossil-free hydrogen, fuel cells, solar panels, and batteries, this innovative. Polarium, a leader in energy storage solutions, proudly announces its role in the Offgrid Roslagen project, sponsored by the Swedish Post and Telecom Authority (PTS) installed at a Telia site. Given the increasing deployment and thereby higher energy use of 5G mobile networks in Sweden, the objective of this master thesis project is to numerically investigate a novel heat pump-based waste heat recovery solution integrated with the electronics cabinet of the rooftop telecommunication base. This research leverages historical electricity price data and advanced optimization algorithms, such as Dijkstra's, to minimize energy consumption and costs. The energy solution for Telecom Base Station combines renewable energy, energy storage systems and intelligent energy management technology to meet the base station's demand for continuous power supply and ensure the stable, efficient and environmentally friendly operation of communication. The optimization of PV and ESS setup according to local conditions has a direct impact on the economic.
