

New Type of Earthquake-Resistant Cabinet

Overview

Seismic cabinets are engineered with reinforced structures to stay stable and protect equipment during intense motion. Protection extends beyond earthquakes to vibrations from railways, machinery, and construction. The enclosures are loaded with simulated equipment and placed on a shaker table designed to replicate the force of an earthquake. Matt Springer has been giving presentations around San Francisco about home earthquake preparedness since 2008 (for more information about the presentation, go to his earthquake preparedness website).
