

Optical Cable Line Maintenance Plan

Overview

Monthly Maintenance: Randomly inspect fiber optic cable connections, test backbone fiber optic link attenuation, and clean connector end faces. 25 deals with general features in relation to the maintenance and operation of optical fibre cable networks. Small oil micro-deposits and dust particles on fiber optic cable optical surfaces may cause a loss of light or degraded signal power which may ultimately cause intermittent problems in the optical connection. QSPTEK rigorously tests all optical transceivers and optical fibers to ensure performance and compatibility meet requirements, ensuring users an efficient and stable system when building or expanding their fiber optic networks.

Maintenance: Lifecycle Extension Through Routine Care Even passive systems require proactive upkeep: Regular inspections: Visual and OTDR testing to detect degradation.
