

# Optical Module Teardown

## Overview

---

In this video I show a teardown and component salvage of an optical drive module. Optical drives typically carry many useful parts like actuators (DC & Stepper motors, VCA), linear motion elements, optics, and other neat stuff. It is also a QSFP28 connector on the other end so it fits into the same slot as the 100G QSFP28 DAC we showed previously. FTL410QE4C QSFP+ optical transceivers are designed for use in 40 Gigabit per second links over multimode fiber. I recently had the pleasure of working with Lumenci, and I their technical patent. InfiniBand offers a technological pathway for building AI/ML networks, with its primary advantages being low static forwarding latency and hardware fault self-repair. The InnoLight solution is based on the INPHI chipset, the IN010C50 PAM4 DSP, the four GaAs laser driver dies, and a TIA die, all designed by INPHI. The Critical Materials Council (CMC) Conference, brought to you by TECHCET, is a two-day event designed to deliver actionable insights into the materials and supply chains that enable today's and tomorrow's semiconductor manufacturing.

## Optical Module Teardown

---
