

Optical Power Meter Range

Overview

Our optical power meters deliver reliable measurements from -60 to +10 dBm across 750–1700 nm, supporting a broad range of optical testing applications and high-channel-count parallel testing of PICs and CPO devices. The term usually refers to a device used for measuring the average power in fiber optic systems. Optical power meters and detectors have been served by Newport for over 30 years. The offering ranges from a low cost, hand-held meter to the most advanced dual channel benchtop power meter available in the market. Our 1936-R/2936-R series boasts state-of-the-art analog boards with a whopping 250. Discover the perfect optical power meter for your application. An optical power meter (or laser powermeter) is an instrument for the measurement of the optical power (the delivered energy per unit time) in a light beam, for example a laser beam.
