

Performance Comparison of Coaxial Cable and Optical Cable

Overview

In the ever-evolving landscape of telecommunications and data transmission, the choice between coaxial cable and fiber optic cable is pivotal for optimizing network performance, scalability, and cost-efficiency. Coaxial cable, a legacy technology featuring a central copper conductor wrapped in a. Each pair would consist of a wire used for the positive data signal and a wire used for the negative data signal. There are two main types of internet lines: the HFC type "coaxial cable line" that combines optical fiber and coaxial cable, and the FTTH type "optical line" that uses optical fiber cable. Since these communication methods are completely different, each has its own advantages and disadvantages.
